## Natural Starch Modification

### **Description:**

AgCenter scientists have developed a new process to modify the properties of starch without chemicals. Normally, such changes would require that the ingredient be labeled “modified starch”; however, this process allows the ingredient to be labeled simply as “starch”. The unique process can also increase the natural benefits of the starch, such as satiety, making it more appealing to consumers.

### **Advantage:**

- All natural process
- No additional labeling requirements
- Creates healthier final products

### **Commercial Uses:**

- Producing foods containing starch

### **Intellectual Property on the Web:**
